

Unical

Pure technology

Clean design and practical panel board with wide "Power save" display

The idea of !DEA was born from three concepts:

- Maximum easiness of use
- *Extreme reliability*
- Highest installation speed

The range consists of **13 wall hung gas** boilers for heating only or for heating and D.H.W. production, both, in room sealed or natural draught versions, with electronic ignition and conventional combustion.

!DEA can operate with natural gas or LPG.

Electrical protection degree is IPX5D (IPX4D for natural draught version). Dimensions:

- *beight 700 mm*
- width 420 mm
- depth 255 mm (345 mm for all 28 and 32 kW models)

It has been conceived both, for the first installation and for replacement of existing boilers in a very simple way. Thanks to the electronics, developed together with Honeywell, and to the rationalization of the assembly, that make it unique, impresses for the maintenance simplicity and for its sturdiness. Elements that reinforce this imagine:

- completely metallic casing
- epoxy-polyester painting
- sound and thermal insulation with 8 mm thick material
- thermal reflecting layer
- completely metallic hydraulic connections

The aesthetics of the front panel has simple, engraved, curved lines, that confer great solidity to the whole assembly and integrate pleasantly the panel board, including:

- two knobs
- a time-controlled back lighted display for the maximum electric saving
- boiler pressure gauge

!DEA disposes of a complete catalogue of accessories, smoke pipes, modulating or ON/OFF thermostats, outer sensor, allowing to solve any installation problem.

The mechatronics of !DEA

Bi-thermal copper heat exchanger for !DEA AC 23 and CS 18 - 24 -28 - 32 with different lengths

Pump body with built-in air vent

Mono-thermal copper heat exchanger for !DEA AR 23, RS 18 - 24 - 28, AC 23 Plus and CS Plus 24 - 28 - 32

Panel board with back lighted, multifunctional, "Power save" display

Pump anti-jamming function timer

HONEYWELL electronic PCB with microprocessor

Built-in flow switch

Frontward rotating panel board for an easy access to the internal components

Anti-frost protection for high reliability

The components quality

The copper heat exchangers

Under the same casing are foreseen, according to the model, *different types of heat exchangers*, with fast connections, in order to speed up the maintenance, carefully studied.

DEA AC 23 - !DEA CS 18-24-28-32

Bi-thermal ultracompact beat exchanger, with a large finned surface made of six copper pipes of oval section, where inside are inserted the pipes for sanitary water circulation (up to 17,83 l/min) with a temperature difference between inlet and outlet of 25K, assures the maximum rapid heat exchange.

- Combustion efficiency up to 94,4% at full load.
- High combustion quality with CO_2 up to 8.5% and CO at 58 ppm.
- Effective air venting thanks to the oversized manifolds, that assure an easy water circulation and a remarkable noise reduction thanks to the reduced internal pressure losses.
- Maximum thermal exchange speed due to the large number of exchange fins.
- Drastic reduction of the scaling deposits.
- Fast hydraulic connections.
- Immediate hot water production if compared to the traditional instantaneous boilers.
- Quick answer to the temperature variations, thanks to the very low inertia as result of materials and shape.
- Sensible energy saving.
- IDEA AR 23/RS 18-24-28/AC 23 Plus/CS 24-28-32 Plus Mono thermal ultra-compact heat exchanger with finned surface that winds six oval-shaped copper pipes.
- Combustion efficiency of 94.6% at full load
- High combustion quality with CO₂ up to 8.4% and CO at 60 ppm
- Fast hydraulic connections

The high comfort combi

- DHW stainless steel plate heat exchanger

 (n°12 plates x 23 and 24 kW n°14 x 28 kW n°16 x 32 kW)
 This choice gives an higher exchange surface so, with the same water temperature and needed quantities, it's possible to let the boiler work with lower temperatures, obtaining:
 - Constant water temperature during the drawings
 - DHW production up to 18,47 l/min with Δt 25 K.
- Monothermic primary heat exchanger (for AC 23 Plus and CS Plus 24-28-32): it guarantees all the necessary capacity and the ideal efficiency at all load conditions.
- Motorized diverting valve (for all Plus models), of new conception, result of Unical technologic study, its part of a brass hydraulic group, very compact and, thanks to the powerful electric motor, allows quickly and safely to divert the hot water produced by the primary heat exchanger, to the plate heat exchanger or in loop to the heating circuit, optimizing the operation in temperature modulation.

Bi-thermal copper heat exchanger

Mono thermal copper heat exchanger

Technology for the comfort

Supplied as standard for all the range

The design has particularly cured the internal positioning of all the components together with the search of the best compromise between compactness and ease of maintenance.

- *The wide burner in stainless steel* with 11 ramps (for 18 - 23 and 24 kW), 13 ramps (for 28 kW) and 15 ramps (for 32 kW) produces a silent and well distributed combustion.
- *The digital electronic ignition* with three flame ignition attempts, exalts its reliability in every climatic condition, both "at cold and hot start".
- The continuous proportional/integral modulation of the gas managed by the HONEYWELL driving PCB, both in CH and DHW mode, through two temperature control sensors (for DHW and CH), determines, with a precision close to 1 K, the certitude of the pre-set adjustments.

High performances

Highly effective pump

among the most reliable ones, complete with fast removable air vent, has been selected to compose a redoubtable hydraulic group, suitable for all the models.

At last, an assembly of electronic functions exalts the completeness of its performances.

The anti-overbeating post-circulation

of 15 seconds controls, in every condition, the thermal equilibrium between flow and return, also after strong drawings of DHW, whilst, in CH mode, with a lasting of 5 min, allows to exploit all the residual heat.

The anti-frost protection

intervenes at 5°C and is activated both, in DHW and in CH mode, increasing the boiler temperature at 15°C. The risk that !DEA could freeze, if the low temperature, where the boiler is installed, persists, is avoided. If there is lack of gas, the lockout of the boiler will be shown on the display.

The pump anti-jamming function

also after long inactivity periods, sends an impulse to the pump for 5 seconds, every 24 h stop, that makes the pump in operation, thus avoiding the oxidation could block it.

The technical service function

makes easier the combustion adjustment operations. By depressing the reset button for more than 3 seconds, it is possible to obtain the boiler operation, at min. or max. output, for 15 min, so that the necessary gas valve adjustments can be made.

The air pressure switch

has been selected in order not to be influenced by the external climatic conditions that could make its function fruitless.

Intuitive controls

Panel board

The electronic panel board will result familiar immediately. And last, but not least, all the harness and intervention operations are easily made by the frontward rotation of the panel board.

The multifunction LCD display, with time controlled back lighting, allows:

- The reading of the CH and DHW temperatures
- The showing of the burner lockout due to lack of flame
- The operation/stand-by status
- The diagnostics with indication of 11 possible faults
- L.H. side knob with double function: ON-OFF switch and CH temperature setting between 45 and 78°C
- R.H. side knob with DHW temperature setting between 35 and 57°C

Accessories (optional)

REMOTE CONTROL REGOLAFACILE modulating, weekly Code 00260878

REMOTE CONTROL SIM-PLEX controls without chronothermostat Cod 00262077

REMOTE CONTROL SIM-CRONO modulating, weekly Cod. 00262079

ON-OFF CHRONOTHERMOSTAT REGOLAFACILE Code 00262605

CHRONOTHERMOSTAT GA 240 Code 00260737

OUTER TEMPERATURE SENSOR Cod. 00362077
